

DConXi

Model: 089DCONXI

Merk: Newhank

The DCon series features three advanced products, all designed to fit standard European in-wall junction boxes with a depth of 50mm and compatible with widely used EU cover frames, making them perfect for seamless integration into commercial, educational, and entertainment AV environments.

This two-channel XLR input panel converts analog audio to Dante, the industry-standard audio-over-IP protocol. Each input is equipped with an adjustable preamp that offers up to 42dB of amplification plus -100 to +27dB digital gain, along with switchable Phantom Power for handling microphones and other audio sources with precision. DConXi also provides an API for integration with third-party control systems, making it an ideal choice for customized installations.
